Trans NT+	Cidlines	positive advice	negative advice
Virocid	Cidlines	positive advice	negative advice

All these cleaning and disinfection products were tested on boots in the Bekina® Boots laboratory.
If the products listed in this list are not available in your region, please contact your local distributor of such products.

To do so, go to the web page of the producers in this list, worldwide, and find the distributor in your region.

These tests are indicative and conducted over a short period of 14 days.
Take care of your boots and extend their lifespan by following this cleaning instruction: clean the entire boot (shaft and sole) daily with water after use.
After work do not leave the boots inside your overtrousers. That way, the boots can dry well.
